MRI: BRAIN (PLAIN & CONTRAST)

IMAGING PARAMETERS AXIAL: T1 & T2 WIs. FLAIR : SAGITTAL: T1 & T2 WIs

T2 hyperintensity is seen in the cortical subcortical area in left occipito-parietal region (36 mm) and left temporal area (34 x 24 mm) displaying high signal intensity on FLAIR cystic changes in the occipito-parietal area. Low signal intensity is seen on T1WIs definite diffusion restriction is noted. No definite blooming is noted. On post-contrast : diffuse enhancement is seen in the cortical and cortico-meningeal area. Vasogenic edema is seen in the underlying brain parenchyma with mass effect over the left lateral ventricle and minimal shift of the midline septum to contra-lateral side -----
-----? MULTIFOCAL NEOPLASTIC ETIOLOGY VS D/D

Rest of the brain parenchyma is normal including brain stem and cerebellum.

Bilateral lateral, III and IV ventricles are normal.

Suprasellar, interpeduncular, ambient, quadrigeminal and CP angle cisterns are normal.

Bilateral sylvian fissures are normal.

Sellar, supra sellar, and para sellar areas are within normal limits.

CT SCAN HEAD (PLAIN)

STUDY PROTOCOL: NCCT of the head has been done without IV contrast administration. Images submitted for interpretation in soft tissue and bone window settings.

FINDINGS :

The study reveals hypodense area involving the left parieto-temporo-occipital region and splenium of corpus callosum s/o vasogenic edema /infarct/gliosis . There is mid line shift of approximately 4.2 mm towards the right side

Multiple confluent hypodense areas are seen in the bilateral fronto-parietal periventricular white matter regions s/o non-specific ischemic changes.

Attenuation values of rest of the cerebral parenchyma are normal.

Ventricular system and CSF spaces are prominent consistent with age related cerebral atrophy.

Bilateral basal ganglia and thalami appear normal.

Cerebellar parenchyma shows normal attenuation.

Region of the brain stem appears normal.

The calvarium is unremarkable. No obvious fracture.

OPINION: CT FINDINGS REVEALS:

- ✦ Hypodense area involving the left parieto-temporo-occipital region and splenium of corpus callosum s/o vasogenic edema /infarct/gliosis with midline shift towards the right side.
- ✦ Age related cerebral atrophy with small vessel ischemic changes in supratentorial white matter.
