DISCHARGE SUMMARY

Name: Mr Jai prakash mishra
Ward: OPW 209
D.O.A: 23/05/22

Age/Sex: 74 Years/M
UHID: 105990326
D.O.D: 28/05/22

DIAGNOSIS:

- CAD-POST CABG(2019) Normal LV Systolic function
- BENIGN PROSTATE HYPERPLASIA
- HYPERTENSION
Hypertensive retinopathy
- RIGHT LUNG UPPER LOBE ORGANIZING PNEUMONIA

HISTORY AND PHYSICAL FINDINGS AT PRESENTATION:

73 years old male, k/o benign prostatic hyperplasia, CAD/Triple vessel disease-post CABG (2019), presented with complaints of fever, cough with minimal to moderate expectoration and dyspnea on exertion for one week. Dyspnea had worsened from MMRC-I TO MMRC-II. There is no history of documented loss of weight, bone pain, muscle weakness. Patient is a non-smoker, non-alcoholic. He was diagnosed to have hemorrhoids in 2002 for which he underwent banding in 2011 due to acute bleeding from hemorrhoids. He was evaluated for jaundice and abdominal distension in 2011 and was diagnosed as abdominal tuberculosis and given ATT for 11 months (documents N/A). He had two previous episodes of ACS, one in 2014 managed conservatively; another in 2019, after which he underwent CABG for triple vessel disease. Patient was diagnosed to have BPH in 2015 and is on medications for the same.

ON EXAMINATION:

At presentation:

No pallor, icterus, clubbing, cyanosis, pedal edema. No palpable peripheral lymphadenopathy
E4V5M6, conscious, oriented to time, place, person
BP-146/79 mm Hg
HR-86 /min
RR -20 /min
SpO2 -96% on room air (sitting posture) , 92% in supine position

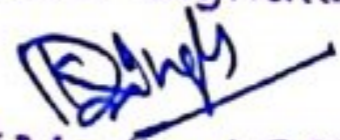

Systemic examination:

RS- Trachea deviated to right side (Trails sign positive on right side)
Increased vocal resonance in right infraclavicular and supraclavicular, interscapular regions.
Decreased air entry on right infraclavicular and supraclavicular areas, bronchial breath sounds in right interscapular area.
CVS-S1 S2 present, no murmur
CNS - E4V5M6, conscious and oriented, B/L plantar flexor
ABDOMEN - Soft, non tender, no palpable organomegaly

TREATMENT GIVEN AND HOSPITAL COURSE:

Patient was admitted with above complaints for further evaluation. CECT chest (done while being admitted in private hospital since a week) showed right upper lobe homogenous soft tissue density. Patient was admitted under Prof Dr Sanjeev Sinha who reviewed the case and after discussion of CT chest and PET films, it was decided to a CT guided biopsy while continuing iv antibiotics. Patient underwent CT guided transthoracic lung biopsy (done by Prof Sanjay Thulkar) from right upper lobe on 24/5/22. Post-procedure patient was hemodynamically stable and developed no complications

Counter Signature

Chief Medical Officer
Moradabad

related to the procedure. HPE from Biopsy sample is suggestive of organizing pneumonia, gene Xpert- M.TB was not detected, bacterial culture was sterile and fungal culture is awaited. Histopathology report showed no evidence of malignancy in the biopsy specimen and reported as organizing pneumonia. Medical oncology consultation was taken from Dr Deepam Pushpam who has advised to continue antibiotics and to repeat imaging on OPD basis after four to six weeks. In view of organizing pneumonia antibiotics have been continued. Plan is to review in OPD and decide on further management including imaging, further tissue sampling and steroids if required. Fundoscopy showed Grade 2 hypertensive retinopathy. 2D echo showed normal L.V systolic function, with mild AR. Patient is presently hemodynamically stable and maintaining saturation on room air and is being planned for discharge with advise to follow up in Lung Cancer clinic, IRCH and Medicine OPD.

ADVICE ON DISCHARGE:

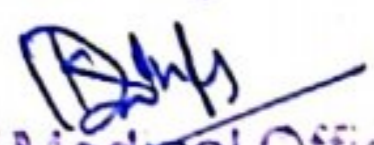

S.No.	Drug Name	Dosage	Frequency	Duration
1.	Tab Augmentin	625mg	TDS 8-8-8	2 weeks
2.	Cap Vizylac	One capsule	TDS 8-8-8	2 weeks
