Methods: Automated Integrated Biochemistry & ImmunoAssays-VITROS-5600

| | |
|-----------|---|
| 0.1 ng/ml | (A) No risk of sample taken after 12 hrs. (B) If between 6-12 hrs, Correlate with ECG findings, Repeat test at appropriate interval of 3-6 hrs Repeat sample after 6 hrs. |
| 0.9 pg/ml | (A) If increase in Trop T HS is < 20% - Excluded recent MI. (B) If increase is 20-100% may be due to noncardiac illness Clinical context to be considered. (C) If increase is > 100% suggests recent infarct. |
| pg/ml | This level with chest pain, is consistent with High Risk of myocardial infarction. |

Conditions other than myocardial infarction can also elevate Troponin - T HS including other cardiovascular disease, infection, PE and renal failure.

↑ BNP
Method: *Enzymed Linked Fluorescent Assay*
Value: **748.0** **pg/ml** **0.0 - 450.0** **(Pro BNP)**

Interpretation :-
Levels less than or equal to 100 pg/mL are representative of normal values in patients without CHF
Levels greater than 100 pg/mL are considered abnormal and suggestive of patients with CHF.
Levels of > 5,000 pg/mL are considered very high values for BNP and exceed the upper limits of the BNP test.
BNP concentrations measured in the first 72 hours after an acute coronary syndrome are associated with an increased risk of myocardial infarction, and CHF.
BNP concentrations or the lack of a decrease in the BNP concentration from hospital admission to discharge indicate an

REPORT PRINT DATE/TIME: **01/01/2024 18:04:58**

TYPE: **WB/ EDTA.SST/ RED TUBE**

NAME: Value Unit Biological Ref Interval

Increased risk of hospitalization or death in patients with heart failure.

Test should be used in conjunction with medical history, clinical evaluation and other diagnostic procedures. If clinical factors affect the BNP concentration like age, gender, BMI & renal function.

BNP is secreted by the ventricular musculature in response to volume or pressure overload. The BNP is a 32 amino acid protein molecule that is released from the ventricular musculature. BNP is stored mainly in the myocardium and has biologic effects similar to those of Atrial Natriuretic Peptide (ANP). The circulating levels directly correlate with the higher incidence of cardiac events and mortality in patients with heart failure.

Causes: Heart failure, Asymptomatic left ventricular dysfunction, Arterial & Pulmonary hypertension, Cardiac hypertrophy, Valvular disease, Arrhythmia, Acute Coronary syndrome.
Cardiac causes: Acute & Chronic renal failure, Liver Cirrhosis, Hyperaldosteronism, Cushing's syndrome.

Uses: Confirm heart failure in patients presenting with ambiguous clinical symptoms.

 REFERRED BY DR: Dr. SACHIN GOYAL .MBBS, MD (Medicine)

SAMPLE: WB EDTA,SST/ RED TUBE
 REPORT PRINT DATE/TIME: 01/01/2024 18:04:58

| Parameter Name | Value | Unit | Biological Ref Interval |
|-----------------------------|-------|-------|-------------------------|
| HORMONE ASSAY REPORT | | | |
| PSA | 1.21 | ng/ml | |

| Age (Years) | PSA Upper Limit (ng/mL) |
|-------------|-------------------------|
| < 40 | < or = 2.0 |
| 40 - 49 | < or = 2.5 |
| 50 - 59 | < or = 3.5 |
| 60 - 69 | < or = 4.5 |
| 70 - 79 | < or = 6.5 |
| > or = 80 | < or = 7.2 |

Prostate Specific Antigen (PSA) is a glycoprotein produced by the secretory cells of prostatic ducts and acini in males and by the sebaceous glands in females.
 PSA level in blood has been used as a marker to detect prostate cancer.
 PSA: both free and bound PSA.
 PSA: amount of protein that has been inactivated by internal proteolytic cleavage.
 PSA: a cytoplasmic marker that is sensitive and specific for prostatic tissue and adenocarcinoma of prostatic origin.
 PSA: total PSA is in the range of 4.0 to 10.0 ng/mL. Free/total PSA ratio of < 10 - 15% is highly suspicious for prostate cancer.
 PSA: PSA ratio of > 25% is more likely to be benign.
