Comment

Probes must be calibrated every twelve months in order to maintain the performance characteristics of the device. Fibroscan® is a medical diagnostic tool. This examination must be carried out by a certified operator. The result must be interpreted by a practitioner who is a liver specialist, according to the clinical context of the illness and taking into account the number of valid measurements, their scatter (IQR), and the success rate. www.echosens.com

HISTOPATHOLOGY & CYTOPATHOLOGY

HPE - SMALL SPECIMEN/ENDOSCOPIC BIOPSIES+SPECIAL STAINS+IHC as needed

Result

Provisional Diagnosis:

Gross:H-5631/18

Omental biopsy - Received 3 linear cores of omental biopsy largest measuring 0.8 cm and smallest measuring 0.4cm in length. All embedded.

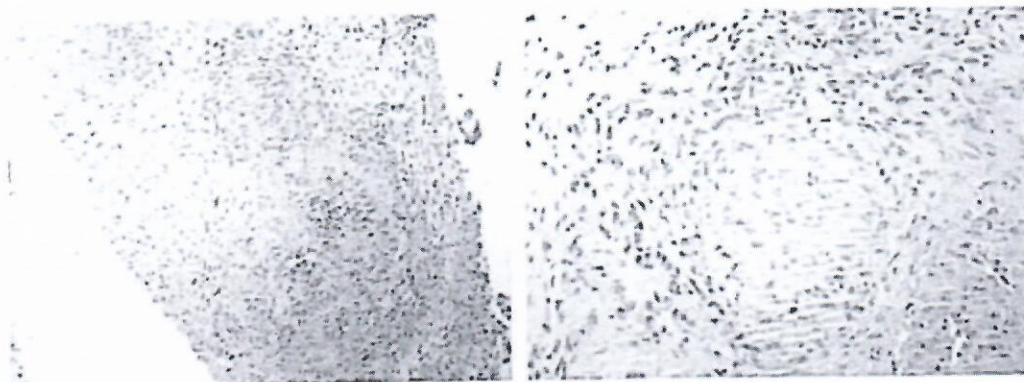

Microscopy:

Omental biopsy shows fibro fatty tissue with multiple granulomas composed of epithelioid cells, occasional Langhans giant cells and lymphocytes. No necrosis seen. No evidence of neoplastic pathology noted.

Other studies:AFB is negative

Impression:

Omental biopsy -Granulomatous pathology
Note:Possibility of tuberculosis cannot be ruled out.
