Dr. Shweta Agrawal

M.B.B.S. (Gold Medalist) (KGMC, LKO.)
MD. (Radiodiagnosis) (S.G.P.G.I., LKO.)

Patient Name : Anchal 9.11.2020
Clinician Incharge : Dr. Toolika MS

ANTENATAL ULTRASOUND

➤ Single live intrauterine foetus in unstable lie..

Gestational parameters:

- BPD = 54.1 mm. corresponding to 22 wk 03 days
- FL = 39 mm. corresponding to 22 wk 04 days .
- Foetal heart rate - 146 beats / minute, regular.

Fetal Anatomy:

- **Fetal brain** – Fetal skullvault , thalami , midline falx , ventricles , cerebellum , cisterna magna and rest of the brain structures show normal morphology . No hydrocephalus seen- Ventricular atria measure 5mm ..No intracranial calcification noted . .
- **Fetal spine** visualized normally . No obvious mass seen posterior to spine
- **Fetal urinary system** - Fetal bilateral kidneys and urinary bladder visualized normally .No hydronephrosis on either side .No cystic lesion noted.
- **Fetal abdomen** – shows normal fluid filled stomach No fetal ascitis seen ...No abdominal wall defect noted .
- **Fetal thorax** –Lungs are assessed for echogenicity . No mass noted
- **Fetal CVS** – The cardiac situs , size and four chamber view visualised normally ..
- All the four limbs are visualized- normal in lengths ..
- Interorbital distance is normal ...

Genetic marker screening

- Mega cisterna magna- no
- Three vessel cord – yes
- Nuchal fold thickness – normal
- Echogenic bowel – no
- Ventriculomegaly – no
- Nasal bone – yes
- Choroid plexus cyst – no
- Pelviectasis – no
- Echogenic cardiac focus – no
