M.B.B.S., M.D. Radiodiagnosis PGI  
Ex-Registrar & Faculty, PGI Ranchi  
S.T.A. POINER, Chandigarh  
MRI & CT Expert

Opp. M.B. Inter College, Nainital Road, Bareilly  
Mob.: 9837028166, 9837016346, 8191002062

112, Civil Lines, Near Easy Day, Rampur Garden, Bareilly  
Mob : 9536026660, 9837015266 Tel.: 0581-2425666

ID CODE	:: MR-3801
PATIENT'S NAME	:: RAZIYA SULTAN
AGE/SEX - FILMS	:: 35Y/F - 03
REFERRED BY	:: DR. VARUN KUMAR AGARWAL MS
DATED	:: NOV.06.2020

## MRI: LEFT KNEE

### IMAGING PARAMETERS

AXIAL: T2 FS WIs.; SAGITTAL: T2 & PD WIs.; CORONAL: T1 & PD FS WIs.

Small subarticular cystic area of size 08x09mm at medial femoral condyle & few other small cystic areas in tibial spine region, mild erosion at articular surface of patella, small marginal osteophytes at superoinferior patellar margins, medial femoral & tibial condylar margins suggesting mild osteoarthritis.

Grade II injury / degenerative changes posterior horn medial meniscus.

The visualized proximal fibula show normal morphology & signal intensity.

The joint space and compartments appear normal. No evidence of any effusion seen.

Mediolateral collateral ligaments appear normal.

The lateral meniscus show normal morphology and signal intensity.

Anterior cruciate ligament and posterior cruciate ligament are normal in orientation, morphology & signal intensity.

Alignment of the femur and tibia at the joint are normal. Rest of visualized articular cartilages appear normal.

## IMPRESSION

- SMALL SUBARTICULAR CYSTIC AREA OF SIZE 08X09MM AT MEDIAL FEMORAL CONDYLE & FEW OTHER SMALL CYSTIC AREAS IN TIBIAL SPINE REGION, MILD EROSION AT ARTICULAR SURFACE OF PATELLA, SMALL MARGINAL OSTEOPHYTES AT SUPEROINFERIOR PATELLAR MARGINS, MEDIAL FEMORAL & TIBIAL CONDYLAR MARGINS SUGGESTING MILD OSTEOARTHRITIS.
- GRADE II INJURY / DEGENERATIVE CHANGES POSTERIOR HORN MEDIAL MENISCUS.

ADV CLINICAL CORRELATION AND FOLLOW UP STUDY.

**DR. P. K. SINGH**

MD RADIODIAGNOSIS (PGI)  
FORMERLY CONSULTANT PGI RTK.  
Mob.- 9012066660

The science of radiology is based on the interpretation of various shadows produced by both the normal & abnormal tissues & are not always conclusive. Further relevant investigations & clinical correlation is required to enable the clinician to reach the final diagnosis. Discrepancies due to technical or typing errors should be reported for correction within 7 days, no compensation liability stands.

3 TESLA DIGITAL MRI

64 SLICE CT SCAN

COLOUR ULTRASOUND

O.P.G. / DENTAL X-RAY

CONTRAST CT ANGIOGRAPHY

3D CT SCAN FACE

CT PULMONARY ANGIOGRAPHY

PATHOLOGY

DEXA BMD, ECHO,  
TMT, ECG, EEG, EMG,  
NCV, PFT, HSG, IVP  
Barium Studies

## MRI LUMBAR SPINE WITH SCREENING OF WHOLE SPINE, B/L SI & HIP JOINTS

DEDICATED STUDY FOR LUMBAR SPINE PERFORMED USING 16CHANNEL CTL ARRAY ON 3.0 T SUPERCONDUCTIVE MRI MACHINE  
IMAGING PARAMETERS  
SAGITTAL: T1 & TSE T2 WIs.; AXIAL: T2 WIs.; CORONAL: STIR.

Mild focal right paracentral disc protrusion at L1-2 level causing indentation over ventral thecal sac without significant canal stenosis/ neural foramina narrowing/ radiculopathy.

Mild disc herniation at L4-5 level causing mild indentation over ventral thecal sac, B/L neural foramina & B/L exiting nerve roots.

Mild disc bulge at L5-S1 level without significant canal stenosis/ neural foramina narrowing/ radiculopathy.

Rest of vertebrae & IV discs are unremarkable.

Spinal canal diameters (in mm) at disc levels are-

L1-2	L2-3	L3-4	L4-5	L5-S1
11	15	15	12	10

Posterior bony elements, facet joints and rest of B/L neural foramina are normal.

Rest of thecal sac is adequate to accommodate the intraneural component. Spinal cord & conus medullaris are normal. Para spinal soft tissues are normal. B/L sacroiliac & hip joints are normal. No infective/ mitotic lesion.

Screening cervical spine reveals mild disc bulge at C5-6 level. Screening dorsal spine reveals no significant abnormality.

## IMPRESSION

- MILD FOCAL RIGHT PARACENTRAL DISC PROTRUSION AT L1-2 LEVEL CAUSING INDENTATION OVER VENTRAL THECAL SAC WITHOUT SIGNIFICANT CANAL STENOSIS/ NEURAL FORAMINA NARROWING/ RADICULOPATHY.
- MILD DISC HERNIATION AT L4-5 LEVEL CAUSING MILD INDENTATION OVER VENTRAL THECAL SAC, B/L NEURAL FORAMINA & B/L EXITING NERVE ROOTS.
- MILD DISC BULGE AT L5-S1 LEVEL WITHOUT SIGNIFICANT CANAL STENOSIS/ NEURAL FORAMINA NARROWING/ RADICULOPATHY.

ADV - CLINICAL CORRELATION AND FOLLOW UP STUDY.
