Patient Name:	ANIMESH SAHAY	Patient ID:	029/020
Age/Sex:	19Y/Male	Report Date:	23/12/2020
Modality:	CT	Ref. Phys.:	DR. R. H GOKHALE (M.S)

MRI STUDY OF RT. KNEE JOINT

OBSERVATION:

Mild joint effusion with extension in suprapatellar bursa. There is popliteal cyst formation measuring approx 30x25mm
 Thickening with hyperintense signal noted in anterior cruciate ligament ----- sprain.

The anterior and posterior horns of the lateral and medial meniscus reveal normal configuration and signal characteristics.

The posterior cruciate ligaments show normal contour and signal characteristics.

The medial and the lateral collateral ligaments and the patellar tendon are normal.

The Hoffa's fat pad bursitis

Visualized bones show normal signal characteristics.

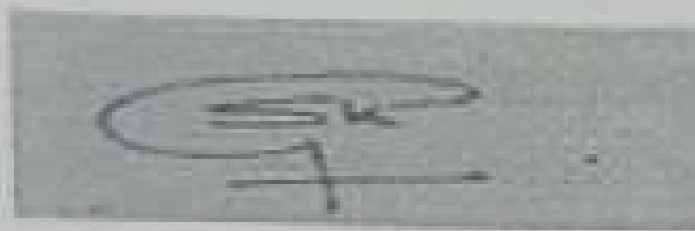

The articular cartilage overlying the patella, tibia and femur appear normal.

IMPRESSION: Findings are suggestive of:

Mild joint effusion with extension in suprapatellar bursa. There is popliteal cyst formation measuring approx 30x25mm

Thickening with hyperintense signal noted in anterior cruciate ligament ----- sprain.

Hoffa's fat pad bursitis
