---

**plaque in arch of aorta. Thoracic aorta and arch vessels are otherwise patent with no significant luminal narrowing.**

No pleural thickening or any effusion in either hemithorax.

Visualized bones and muscles are normal.

**Scanned sections of the upper abdomen reveal small nonenhancing hypodense lesion measuring ~ 10 mm TR x 9 mm AP x 8 mm CC in segment IVA of the liver. Advised: Ultrasound correlation to evaluate for solid vs cystic nature of lesion.**

### CECT CHEST

#### STUDY PROTOCOL:

SECTIONS OF APPROPRIATE THICKNESS WERE TAKEN AT ADEQUATE INTERVALS IN STATE OF ART MULTI DETECTOR CT SCANNER (500SLICES/SEC) SO AS TO COVER THE REGION FROM ROOT OF NECK TO THE DIAPHRAGMS AFTER THE ADMINISTRATION OF I.V. (NON-IONIC) CONTRAST. FEW PLAIN SECTIONS WERE ALSO OBTAINED PRIOR TO CONTRAST ADMINISTRATION. POST PROCESSING WAS DONE ON ADVANCE WORK STATION TO OBTAIN CORONAL AND SAGITTAL SECTIONS.

QUANTITY OF I.V. (NON-IONIC) CONTRAST INJECTED: 50 ml.  
COMPLICATIONS TO CONTRAST MEDIA: NONE

Clinical information: Pain in left eye and blurring of vision.

#### **FINDINGS:**

Ground glass opacities seen in posterior segments of bilateral lower lobes which resolves in prone study suggestive of dependent lung densities.

A small non-calcified solid nodule measuring ~ 6 mm seen in the anterior segment of left upper lobe. Few other tiny non-calcified nodules measuring around 2-4 mm also seen in both lung mainly in lingula of left lung, right middle lobe and bilateral lower lobes.

Rest of the bilateral lungs reveal normal parenchyma with normal bronchovascular pattern.

No nodules with tree in bud configuration, consolidation, cavitation, honeycombing or any bronchiectatic changes seen in the lungs to suggest active lung disease. No nodules seen along the peribronchovascular or fissural distribution.

Mediastinal fat planes are well maintained.

Mediastinal great vessels are normal in course and calibre.

Trachea is in midline with normal divisions at the carina.

An oval lymphnode short axis diameter measuring ~ 6 mm with central focus of calcification seen in precarinal location. Oval non-calcified non-necrotic lymphnodes seen in aortopulmonary and subcarinal location short axis diameter measuring around 6 mm.

No other significant lymphnodes in mediastinum, axilla nor supraclavicular fossa on either side.

Cardiac size is normal with no pericardial thickening, calcification nor any effusion. Eccentric mild
