Ref. By DR. K.K. GUPTA		

Test Name	Value	Unit	Normal Value
-----------	-------	------	--------------

ARTHRITIS PROFILE

A.S.O (QUANTITATIVE) Immunoturbidimetry	80.2	Iu/ml	
---	------	-------	--

Normal value : Adult < 200 Iu/ml
Children < 200 Iu/ml

Antistreptolysins are specific antibodies to extracellular products of Streptococcus Pyogenes, among which " Antistreptolysin O" (ASO) is the one most used for clinical laboratory evaluation. Antibodies against Streptolysin (O) can be detected 1-3 weeks after infection with maximum levels reached at 3-6 weeks. Positive " ASO " always indicates the presence of a Streptococcal infection whereas a negative result cannot exclude an existing or preceding group A Streptococcus infection. End point determination of concentration of ASO ensures high degree of sensitivity and permits objective follow up of ASO levels.

Checked By.....

Dr. Manish Singh

Date 15/11/2019	Srl No. 1001	Patient Id 1911151001
Name Mrs. PREMA DEVI	Age 67 Yrs.	Sex F
Ref. By DR. K.K. GUPTA		

Test Name	Value	Unit	Normal Value
CALCIUM	6.80	mg/dl	8.0 - 10.5
CRP Immunoturbidimetry	102.0		

INTERPRETATION :-

In normal healthy individuals, CRP levels generally do not exceed 6 mgm/L. CRP plays a role in host defence and tissue repair. There is a lag time of 6 -10 hrs between stimulus and rise in serum levels, as compared to a lag time of 24-72 hrs, for other acute phase reactants.

R.A.FACTOR	10.0	IU/mL	UPTO 20
------------	------	-------	---------

INTERPRETATION

ADVANTAGES OF QUANTITATION :-

Exact concentrations of RA Factor facilitate the following:

- Accurate staging of disease.
- Precise prognosis and indication of complications.
- Adjustment of dose for treatment and follow up of treatment.

REMARKS :-

- RA factor has been demonstrated in approximately 80 % of patients with rheumatoid arthritis.
- False positive results may occur in hepatitis, sarcoidosis, cirrhosis of liver.
- Sjogren's syndrome, acute bacterial and viral infection.
- Diagnosis of rheumatoid arthritis should be made in conjunction with complete clinical evaluation.

BIOCHEMISTRY

CALCIUM	<u>6.80</u>	mg/dl	8.0 - 10.5
---------	-------------	-------	------------

SEROLOGY

VITAMIN D 25 HYDROXY
 (CLIA)

Test Description	Results	Biological Reference Range	Units
Vitamin D, 25 Hydroxy (CLIA)	<u>20.5</u>	30-100	ng/mL

INTERPRETATION OF RESULT:

Deficiency	-	Below 20 ng/ml
Insufficiency	-	20 - 29 ng/ml
Sufficiency	-	30 - 150 ng/ml
Toxicity	-	Above 150 ng/ml

COMMENTS :

Lower-than-normal levels suggest a vitamin D deficiency. This condition can result from lack of exposure to sunlight, lack of adequate vitamin D in the diet, liver and kidney diseases and Malabsorption.

A vitamin D deficiency may lead to:

- Low blood calcium levels (hypocalcaemia)
- Thin or weak bones (rickets, osteoporosis and osteomalacia)
- High levels of parathyroid hormone (secondary hyperparathyroidism)

Total 25-hydroxyvitamin D (D2 + D3) is the correct measure of Vitamin D status.

Higher-than-normal levels suggest excess vitamin D, a condition called hypervitaminosis D. It is usually caused by vitamin D in the form of doctor-prescribed dietary supplements.

95% of serum vitamin D is Vit D3.

D2 is only received from supplements.
