| A.L.Specie: | P | Specified: | 16020021 11:37:37AM |
| | | Report Status: | Final |

Test Name:

Results: 0PMI Ref. Range:
- Intrahepatic type of Liver Disease. ALT activity is higher than that of AST. Ascites may be seen in Alcoholic Hepatitis, Hepatocarcinoma, and Liver cirrhosis. In a patient with Chronic Liver Disease, AST/ALT ratio >1 is highly suggestive of advanced liver fibrosis.
- Prothrombin time of 12.7sec. Liver disease due to viral Hepatitis B & C, Alcoholic liver disease or NAFLD. Enhanced Liver Function (ELF) test may be used to measure liver fibrosis.
- In a patient with Chronic Liver Disease, AFP and Des-gamma-carboxy prothrombin (DCGP/PIKA 0.200) can used to assess risk for development of Hepatocellular Carcinoma.

| A/c Status | P | Ref By: SELF | Reported | 15/2/2021 4:11:56PM |
| | | | Report Status | Final |

Test Name:

Note:

Results:

Units:

Bio. Ref. Interval:

1. This is a screening test and the result should be interpreted in conjunction with clinical findings and other diagnostic tests.
2. This assay is used for qualitative detection of antibodies to Hepatitis C virus in serum samples and cannot differentiate between the stages of Hepatitis C viral infection.
3. Sensitivity and Specificity of the Anti-HCV test by ICT is 99.3% and 98.1% respectively.
4. False negative reaction may be due to processing of sample collected early in the course of disease, Prozone phenomenon, Immunosuppression & Immuno-incompetence.
5. Test conducted on serum.

Comments:

Hepatitis C virus (HCV) is recognized as a major agent of chronic hepatitis, transfusion acquired non-A, non-B hepatitis and liver disease throughout the world. HCV is an enveloped positive-sense, single stranded RNA virus of Flavivirus group transmitted via blood transfusions, transplantation, injection drug users, accidental needle punctures in healthcare workers, dialysis patients and rarely from mother to infant. 10% of new cases show sexual transmission. As compared to HAV & HBV, chronic infection with HCV occurs in 65% of infected individuals. In high risk populations, the predictive value of Anti HCV for HCV infection is > 99% whereas in low risk populations it is only 25%.

Uses:

- To diagnose suspected HCV infection and monitor the status of infected individual.
- Routine screening of blood and blood products to prevent transmission of Hepatitis C virus (HCV) to recipients.
- For Prenatal Screening of pregnant women.
- Routine screening of low and high prevalence populations including blood donors.

| Test Name | Results | Units | Obs. Ref. Interval |
|--|--------------|-------|--------------------|
| HEPATITIS B SURFACE ANTIGEN (HBsAg), RAPID SCREENING TEST, SERUM (ICL) | Non-Reactive | | |

Interpretation

| RESULT | REMARKS |
|--------------|--|
| Reactive | Indicates presence of Hepatitis B Surface Antigen. |
| Non-Reactive | Indicates absence of Hepatitis B Surface Antigen. |

* All reactive results should be subjected to HBsAg Neutralization test which can be requested as Test Code S118.

Note

1. Reactive test result indicates presence of Hepatitis B Surface Antigen. It cannot differentiate between the stages of Hepatitis B viral infection.
2. Non-Reactive test result indicates absence of Hepatitis B Surface Antigen.
3. False positive results may be observed in presence of heterophilic antibodies in serum or after HBV vaccination for transient period of time.
4. False negative reaction may be due to processing of sample collected early in the course of disease or presence of mutant forms of HBsAg.
5. For monitoring HBsAg levels, HBsAg Quantitative assay is recommended.

HEPATITIS C VIRUS (HCV), RAPID SCREENING TEST, SERUM (ICL) Non-Reactive

Remarks: Results of reactive HCV screening test should be confirmed by supplemental test Like CMIA or confirmatory test like Immunoblot HCV. This test is not meant for monitoring the treatment of disease nor stratifying acute or chronic stages. The result of the test should not be compared to molecular test like HCV PCR as both are different methodologies.

Interpretation

| RESULTS | REMARKS |
|--------------|---|
| Reactive | Indicates presence of antibodies to Hepatitis c virus |
| Non-Reactive | Indicates absence of antibodies to Hepatitis c virus |

KUMAR DIAGNOSTIC CENTRE

Dr. ASHOK KUMAR SHARMA, (SURYA CLINIC) NEAR TOWN HALL, OPP. ANKUR PLAZA, CIVIL LINES, JUJUOR (J.F.), 236717

Patient's name : Smt. Nirmala
Referred by : Dr.
Part Scanned/Repo : Whole Abdomen

Date 17/02/2021

LIVER : Normal in shape size and echotexture.
Intra Hepatic Biliary Radicals are normal.
Sub hepatic and sub phrenic spaces are normal.
No significant mass lesion seen.

GALL BLADDER : Not seen (Oprated)
C B D is normal in caliber.

PANCREAS : Normal in shape size and echotexture.
No mass lesion seen.

SPLEEN : Normal in shape size and echotexture.
No mass lesion seen.

KIDNEYS : Normal in shape size and position.
Corticomedullary differentiation is clear.
No acoustic shadow seen.

U.BLADDER : U.bladder is normal in shape and size. Wall thickness is normal.
No acoustic shadow/mass lesion seen in lumen.

UTERUS & OVARY/ADNEXA : Are seen within normal limits as per age.

IMPRESSION : SONOGRAPHIC FINDINGS DOES NOT REVEAL ANY ABNORMALITY.

A handwritten signature in black ink, likely belonging to the ultrasonologist who performed the scan.

(Ultrasonologist)

Note

* Sonological findings are only professional opinion and not the diagnosis. They are always considered in conjunction with clinical and other investigatory findings where applicable. * All congenital anomalies in a fetus may not be diagnosed in obstetric ultrasound. We are not liable for missing congenital anomaly.
* Identity of the patient has not been established

- Not for medico-legal purpose.

REPORTING INSTRUCTIONS

These results pertain to the specimen submitted. All test results are dependent on the quality of the sample received by the laboratory. Laboratory investigations are only a tool in forming a diagnosis and should be clinically correlated by the Referring Physician. Test results are accepted at Referring Physician within 7 days from reporting. Report delivery may be delayed due to unforeseen circumstances. Inexpediency is regarded. Certain tests may require further testing at additional cost for detection of repeat value. Results report within 72 hours from reporting. Test results may vary interlaboratory variables. The Corporation of India does not assume liability or responsibility concerning the test(s) & or results of test(s). Test results are not valid for medical legal purposes. Contact customer care Toll No. 1800-11-12345678 for all queries related to test results.
