CT SCAN OF THORACO LUMBAR SPINE – PLAIN STUDY

CLINICAL HISTORY: backache

The thoraco lumbar vertebral bodies show normal Trabecular pattern. No evidence of lytic or sclerotic lesion in the vertebral bodies.

At L5-S1 levels, diffuse disc bulge seen indenting thecal sac and causing mild narrowing of bilateral neural foramen.

Bony spinal canal measures normal dimensions. No evidence of bony spinal canal Stenosis.

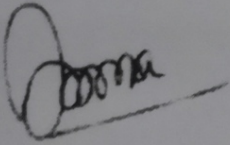

The AP diameters of the bony spinal canal are as follows. L1-15mm L2-14mm L3-14mm L4-14mm L5-11mm .

Spinous and transverse processes appear normal. Pedicles and laminae appear normal. Facets and facet joints appear normal.

Paraspinal soft tissues appear normal.

IMPRESSION:

- **At L5-S1 level, diffuse disc bulge seen indenting thecal sac and causing mild narrowing of bilateral neural foramen.**
