## REPORT

### Ultra sound scanning of Uterus & adnexa done with Transvaginal Transducer.

**Uterus** Uterus is seen enlarged anteverted & measures approx. 92.3 \*50.0 \* 57.5 mm. Endometrial echoes are normal seen in midline & its thickness is 4mm. One hypoechoic mass lesion of 22.0mm\*21.3mm size is seen in ant. Wall & One 20.5mm\*12.9mm in post. Wall & One 20.3mm\*18.0mm submucosal fibroid which press endometrium cavity.

**Adnexae** Rt. Ovary is normal in size & shape. Rt. Ov.- 30.0mm\*24.2mm.  
Lf. Ovary is normal in size & shape. Lf. Ov.- 31.3mm\*15.5mm.

**Impression** Enlarged uterus with multiple fibroids.  
Both Ovaries appear normal.

Dr. Shaila Gupta  
M.B.B.S. (Sonologist)

PNDT Act Registration No. :- RBL / PNDT / 13 / 2002. (No Prenatal Sex Determination)

Report of Ultrasonography is based on the interpretation of various shadows/images produced by both the normal as well as abnormal tissues and is not always definite & Conclusive. The report needs to be interpreted in correlation with clinical findings & results of other bio-chemical and Pathological investigation. All congenital anomalies of fetus can not be ruled out by this. Sex determination of fetus is not done at this centre.

THIS REPORT IS NOT VALID FOR MEDICO - LEGAL PURPOSE.

Name : Aparna Tripathi  
Age/Sex : 35 years/ female  
Date : 19 December 2016  
Referred by : Dr Onkar Singh Bhadoriya

**Report:*****MRI of Lumbo-Sacral Spine with Screening of Dorsal and Cervical Spine***

High resolution MRI of lumbo-sacral spine was performed on a **3.0 Tesla MR Scanner, Siemens Magnetom Skyra**. Following imaging sequences were obtained:

**Axial:** T2 and T1 w turbo-spin-echo (TSE)

**Coronal:** STIR

**Sagittal:** T2 TSE, T1 TSE

Transitional vertebra is seen at lumbo-sacral junction-Partial sacralization of L5 vertebra.

Degeneration of L3-4 and L4-5 intervertebral discs is seen with reduced disc heights. Vertebral heights are normal with maintained alignment and **exaggerated lordotic curvature**. No evidence of pars interarticularis defect is seen. Bone marrow signal intensity is normal.

Mild posterocentral disc protrusion is seen at L3-4 and L4-5 level indenting thecal sac.

No abnormal pre or para vertebral soft tissue is seen.

No evidence of ligamentum flavum hypertrophy.

Conus medullaris is normal in morphology and signal intensity.

Screening MRI of cervical and dorsal spine was performed with sagittal T2 w images reveals mild disc protrusions at multiple levels indenting thecal sac. Spinal cord is normal in dimensions and signal intensity.

**Impression:** Mild posterocentral disc protrusion at L3-4 and L4-5 level indenting thecal sac

**Transitional vertebra at lumbo-sacral junction-partial sacralization of L5 vertebra**
