Patient Name : Pawan Kumar SRIVASTAVA 15 May 2021
Ref. By Dr. : Dr. SELF Sex M
Investigation : CT thorax

HRCT THORAX

FINDINGS:

There are multifocal patchy ground glass opacities with areas of septal thickening and vascular thickening with subpleural bands and patchy consolidation seen in bilateral middle and lower lobes
Mediastinal vascular structures are appear normal. The heart is of normal size.
No evidence of pericardial thickening / calcification seen. No evidence of pericardial effusion.
No significant mediastinal or hilar adenopathy is seen.
No evidence of pleural effusion is noted.
Trachea and both main bronchi appear normal. There are no discrete endobronchial lesions.
Bony thorax and soft tissues appear normal.
Few sections through the upper abdomen do not reveal any obvious abnormality.

LUNG INVOLVEMENT.

LOBES OF LUNGS	SCORE
RIGHT UPPER LOBE	0
RIGHT MIDDLE LOBE	1
RIGHT LOWER LOBE	3
LEFT UPPER LOBE	0
LEFT LOWER	3
TOTAL	7

IMPRESSION

There are multifocal patchy ground glass opacities with areas of septal thickening and vascular thickening with subpleural bands and patchy consolidation seen in bilateral middle and lower lobes
S/O ATYPICAL VIRAL PNEUMONIA. CORADS- 2
TOTAL CT SEVERITY SCORE IS 7 OUT OF 25- THAT IS LUNG ARE MILD AFFECTED.

NOT VALID FOR MEDICO LEGAL PURPOSE
