## HISTOPATHOLOGY

### Histopathology: Large Tissue Biopsy

Sample: Tissue

Lab No : HH 4231-22

**Nature of specimen:** Prostate, biopsy

**Clinical Details:** Not mentioned.

#### Gross Description:

Received multiple grey brown prostatic chips aggregate measuring 5x4x1cm and weighing 10 gm.

#### Blocks : 5

Entire tissue submitted 05 blocks.

#### Microscopy & Impression :

- Prostatic acinar adenocarcinoma, see comment
- Gleason's score : (3+4)
- Grade group : 2, (10% of pattern :4, No cribriform seen)
- Percentage of tumor involvement - 2-5%
- Perineural invasion seen.

**Advice :** Correlate with radiology and Serum PSA level.

Note- Slides, report and paraffin blocks will be kept for 10 years. Please contact customer care in case of any queries.  
 Report entered by :- Noora Baweja.

L21 - PROSTATE SPECIFIC ANTIGEN (PSA) SERUM  
KINARI ROAD, JALAL PUR NEAR JALAL PUR  
POST: CHIKKI  
ALOKHOLA, UP, (05207029344)

Name	: Mr. V P SINGH	Collected	: 22/5/2022 8:39:00AM
Lab No.	: 328388223	Age: 84 Years	Gender: Male
Age Status	: P	Ref By: SELF	Report Status: Final
		Received	: 22/5/2022 8:40:46AM
		Reported	: 22/5/2022 1:01:57PM

Test Name	Results	Units	Bio. Ref. Interval
PSA (PROSTATE SPECIFIC ANTIGEN), TOTAL, SERUM (T,TA)	3.990	ng/ml	<4.00

### Note

1. False low / high results may be observed in patients receiving mouse monoclonal antibodies for diagnosis/therapy or due to interference by heterophilic antibodies & nonspecific protein binding or on high dose Biotin therapy.
2. Immediate PSA testing following digital rectal examination, ejaculation, prostatic massage, indwelling catheterization, ultrasonography and needle biopsy of prostate is not recommended as they falsely elevate levels. Elevated levels of PSA can also be seen in Benign Prostatic disease, Prostatitis and/or Urinary tract infection.
3. PSA values regardless of levels should not be interpreted as absolute evidence of the presence or absence of disease. All values should be correlated with clinical findings and results of other investigations.
4. Physiological decrease in PSA level by 15% has been observed in hospitalized / sedentary patients either due to supine position or suspended sexual activity.
5. Prostate Health Index, OncoPro Prostate Screen are other recommended assay for PSA levels between 4-10 ng/mL (gray zone). It helps physicians to decide if biopsy is necessary.

End of report

Department of Nuclear Medicine & Molecular Imaging

Musculoskeletal System

Non tracer avid fatty marrow changes are noted at left pubic, left iliac bone and left acetabulum- likely post treatment changes.

No suspicious lytic/sclerotic lesions noted in the skeleton. No abnormal PSMA expressing lesion is evident in the skeletal system.

IMPRESSION:

Scan features are suggestive of:

1. Mildly increased PSMA expression at base of urinary bladder and prostate - ? physiological??  
Residual malignancy. Adv:- follow up.
2. No evidence of any other abnormal PSMA expressing lesion in the rest of the body.

Please correlate.

**Comment:**

Vitamin B12 along with folate is essential for DNA synthesis and myelin formation. Vitamin B12 deficiency can be because of nutritional deficiency, malabsorption and other gastrointestinal causes. The test is ordered primarily to help diagnose the cause of macrocytic/ megaloblastic anaemia. Decreased levels are seen in: Increased levels are seen in: anaemia, normal near term pregnancy, vegetarianism, partial gastrectomy/ ileal damage, celiac disease, with oral contraceptive use, parasitic competition, pancreatic deficiency, treated epilepsy, smoking, hemodialysis and advancing age renal failure, hepatocellular disorders, myeloproliferative disorders and at times with excess supplementation of vitamins pills

**SEROLOGY**

TROPONIN I (TROP I) < 0.01 ng/ml 0.00-0.30

Cardiac troponins are currently the most sensitive and specific biochemical markers of myocardial necrosis. There are three types of troponin in heart muscle fibers. Those are troponin-c, troponin-i, and troponin-T. Together they contribute to make cardiac muscle fibers contract. The clinical measurement of serum Tn-i has become an important tool in the diagnosis of acute myocardial infarction.

**Any clinical diagnosis based on the test result must be supported by a comprehensive judgment of the concerned physician including clinical symptoms and other relevant test results.**
