

Occupational Therapy Report

Child Name: Aryansh Shukla

Age: 3.8 yrs./Male

Date of Birth: 31.05.2019

Date of the report: 6/03/2023

Chief complaints: according to the mother-child has

- Poor eye contact
- Poor name-calling response
- Pinching Behaviour
- Poor attention
- Self-talking present
- Self-stimming behaviours
- Poor social interaction with peers.

Medical/Natal History:

- Normal delivery and normal birth cry.
- Normal Developmental milestone.

ON Examination:

Higher Mental Function:

- Vision – Normal
- Hearing – Normal hearing bilateral
- Speech–delayed
- Attention span – Fair
- Ability to follow Instructions – Fair

Motor examination-

- Tone: low tone in UL and normal LL bilateral,
- Muscle strength:3/4 in all extremities,
- Muscle bulk: b/l symmetrical,
- Posture: sitting- normal
 - Standing- normal
- Balance: sitting: good
 - Standing: Good

Gross motor and fine motor skills:

- Gross motor: Fair,
- Transition: fair,
- Supine Flexion: Adequate,
- Prone Extension: Adequate,
- Mobility: Adequate and Independent,
- Skipping: Poor,

*Self Done

<< Our Branches >>

- Anti-gravity Movement: Fair,
- Grasp: present,
- Grip: fair b/l,

Behavioural Observation:

- Separation Anxiety – Present
- Stubborn – Present
- Aggressive – Present
- Self-Control – Poor
- Hyperactive – present
- Command Following – Poor

Evaluation of cognitive-perceptual skills: - Cognition

- Memory (short term, long term)- not testable,
- Attention- poor,
- Concentration- Poor,
- Insight for atypical behaviour- Present.

Perception: -

- Pain perception- Adequate,
- Spatial orientation- Adequate.

Motor planning and praxis:

- Ideation- Fair
- Motor Planning- Fair
- Constructional- Fair
- Sequential- poor

Activities of Daily Living: Dependent by mother

Sensory-based clinical examination:

The following observations are based on clinical observations and a short sensory profile

SHORT SENSORY PROFILE REPORT

Aryansh's sensory profile report completed by his mother shows these raw scores in each section:

- Tactile sensitivity: **27/35**
- Smell/taste sensitivity: **12/20**
- Movement sensitivity: **09/15**
- Under responsive /seek sensation: **11/35**
- Auditory filtering: **15/30**
- Low energy/weak: **21/30**
- Visual/auditory sensitivity: **17/25**
- Total score: **113/190 (Definite and probable Difference)**

THE HOPE REHABILITATION AND LEARNING CENTRE

Road to recovery and growth

Run and Governed by The Hope Foundation

(Registered under Societies Act No. 21,1860 - Reg. No. 03513/2022-2023)

The scores show that aryansh has a **definite and probable difference in Tactile sensitivity, Movement sensitivity, under-responsive/Seeks sensation, Auditory Filtering and Low energy/Weak, Visual/auditory sensitivity**. This means A child with a Definite and probable Difference score in this pattern seeks sensory input at a higher rate than others.

This means that the child is over-responsive to sensory input or is responding to counteract the threshold. This indicates that this sensory input is confusing, upsetting or not meaningful to the child and interfering with Aryansh's ability to complete important activities of daily living as successfully as others do.

Typical performance in Smell/taste sensitivity means he can effectively understand what is happening around him.

RECOMMENDATIONS:

- Aryansh requires individualized Occupational Regularly to improve his functional skills in the above-mentioned areas. This should include Sensory Integration Therapy, as well as gross motor, fine motor, play development behaviour and independent engagement in the activity.
- The family must work closely with the therapist to understand his strengths and issues.

Dr PRITEE KUREEL

DIRECTOR

(The Hope Rehabilitation and Learning Centre)
