Interpretation :-

T.S.H -3rd Generation :- In case of primary Hypothyroidism, T3 & T4 levels are low and TSH level are significantly elevated. Although elevated THS levels are nearly always indicated of primary Hypothyroidism, some rare clinical situation arise which are the result of TSH secreting pituitary tumors (secondary Hypothyroidism) . Primary hyperthyroidism (eg. Grave's disease. Thyroid adenoma or nodular goitre) is associated with high level of thyroid hormones and depressed or undetectable levels of TSH. The functional sensitivity of this assay is to the extent of 0.005 - uIU/mL. Levels below this are not detectable by this assay and will be reported as < 0.005 uIU/ML.

According to american thyroid association (A.T.A.)

TSH level in :
 1st trimester : 0.10 - 2.50 nmol/l
