Introducing ILBS Whatsapp Helpline

Now use WhatsApp to access key services in ILBS

- To connect to doctors in Emergency
- To talk to Admission Desk
- To find out OPD days of our consultants
- To book appointments
- To connect with billing department
- To speak to Duty Officer

And to access many other similar services and functions

For this you no longer need to call and wait for someone to connect you. Our WhatsApp Chatbot will help you quickly and efficiently. Simply activate the Chatbot on your phone by doing the following:

- Scan the QR code with iPhone camera or Google lens
- Click the send button.
- Click on "Start subscription"
- Follow the menu

Scan to connect, NOW!

Hepatitis B surface antigen (HBsAg) ECLIA			
Hepatitis B Surface Antigen(HBS Ag)	4268.0	COV	< 0.90 Negative

Serum, Electro Chemi Luminescent Immuno Assay

COMMENTS:

For diagnostic purposes, the results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings. This immunoassay for the in vitro qualitative determination of hepatitis B surface antigen (HBsAg) in human serum and plasma.

Hepatitis B is a potentially life-threatening liver infection caused by the hepatitis B virus (HBV). It is transmitted through contact with the blood or other body fluids of an infected person. Hepatitis B surface antigen (HBsAg) is a polypeptide component of the external envelope of HBV, presenting various immunogenic determinants. After infection, HBsAg is the first immunologic marker detectable in serum and is usually present weeks before the onset of clinical symptoms and the appearance of other biochemical markers.
