## Intelligence Quotient Assessment Report

**NAME-** Baby Anviti

**AGE-** 6 Years 3 Months

**DATE OF BIRTH-** 1-09-2011

**INFORMANTS-** Parents

**GRADE-** Upper kindergarten

### **Reason for Referral**

Anviti was referred for an evaluation; she is facing development and behavioral, academic issues.

### **Sensory/Motor Status**

According to her Parents, Her hearing screening revealed that she has a normal auditory acuity; her visual senses are normal.

### **Behavioral Observations**

Patient arrived on time for the assessment and was accompanied by her Parents. She appeared some distracted at initial level; during the test process he is some conscious and attentive.

### **RESULTS OF ASSESSMENT-**

Patient was administered of Seguin form board test (SFB) and subtests of the Wechsler Intelligence Scale for Children – Fourth (WISC IV) from which his composite scores are derived. The Shortest time taken on SFB was Thirty Nine seconds. His composite IQ is 75, which Classifiable as Borderline deficiency and often as feeble mindedness.

Note- Mental Age of Patient is four years six months.

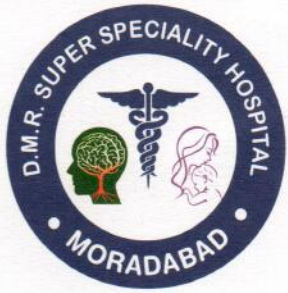

Date: 10/12/2017

Place: MORADABAD
