**ABDOMEN USG**

Liver is normal in size (span 13.4 cm), shape and shows **grade II fatty changes**. No focal lesion seen. Intrahepatic biliary radicles and venous channels are normal. Gall Bladder is distended and shows smooth walls and lumen is echo free. CBD is not dilated. Pancreas is normal in size, shape and echotexture. Spleen is normal in size and echotexture.

Both Kidneys are normal in size, shape and echopattern. No calculi or hydronephrosis seen. **Left kidney shows a simple cortical cyst measuring 2.9 cm in diameter in the interpolar region.** Right kidney measures 10.5 x 4.6 cm. Left kidney measures 10.6 x 5.3 cm.

No enlarged retroperitoneal or mesenteric nodes noted. No evidence of fluid in peritoneal cavity.

Urinary Bladder is normal in distensibility. Wall thickness is normal and lumen is echofree. Pre void urine volume is 182 cc. Post void residual urine volume is nil.

**Prostate is enlarged in size, measures 48 cc.**

**Breech noted in linea alba at the level of umbilicus (width 17 mm) - suggestive of umbilical hernia.**

**Impression :**

- Grade II fatty liver.
- Grade II prostatomegaly.
- Umbilical hernia as described.

**Advice : Clinical Correlation.**

**ABDOMEN USG**

Liver is enlarged in size (16.2cm), shape and shows grade I fatty changes. No focal lesion seen. Intrahepatic biliary radicles and venous channels are normal.

Gall Bladder is distended and shows smooth walls and lumen is echo free. CBD is not dilated.

Pancreas is normal in size, shape and echotexture.

Spleen is normal in size (7.0 cm) and echotexture.

Both kidneys are normal in size, shape and echopattern. No calculi or hydronephrosis seen on left side. Right kidney measures 11.4 x 4.9 cm.

Left kidney measures 10.7 x 5.2 cm and shows a calculus measuring 3.0 mm at upper calyx.

Focal partly exophytic cortical cyst measuring 2.5 cm noted in the mid pole.

No evidence of fluid in peritoneal cavity.

There is seen defect in anterior abdominal wall in umbilical region with herniation of omentum through it, neck of defect measuring 1.8 x 1.7 cm.

Urinary bladder is normal in distensibility. Wall thickness is normal and lumen is echofree.

Prevoid urine volume is 229 cc.

Post void urine volume is 30 cc.

Prostate is enlarged in size and normal in echotexture. It measures 48 cc.

**Impression:**

- Hepatomegaly with grade I fatty changes.
- Left renal calculus.
- Umbilical hernia.
- Prostatomegaly.

Age: 66 Years Gender: Male

Ref By: CGHS

Collected: 3/4/2019 9:40:00AM

Received: 3/4/2019 9:41:10AM

Reported: 3/4/2019 7:03:55PM

Report Status: Final

Test Name	Results	Units	Bio. Ref. Interval
TSH, ULTRASENSITIVE, SERUM @ (CLIA)	6.936	uIU/mL	0.550 - 4.780

Note

- TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
- Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some individuals

Clinical Use

- Diagnose Hypothyroidism and Hyperthyroidism
- Monitor T4 replacement or T4 suppressive therapy
- Quantify TSH levels in the subnormal range

**Increased Levels:** Primary hypothyroidism, Subclinical hypothyroidism, TSH dependent Hyperthyroidism, Thyroid hormone resistance

**Decreased Levels:** Graves disease, Autonomous thyroid hormone secretion, TSH deficiency

**ULTRASOUND WHOLE ABDOMEN**

Ultrasound was done using a curvilinear probe with special 2D enhancement features including compound and speckle reduction imaging (SRI).

*Clinical profile: Patient has complaints of abdominal discomfort.*

**Liver:** is enlarged in size and measures 16.8cm craniocaudally. It shows mild increased echogenicity suggestive of grade I fatty changes. No evidence of any focal parenchymal lesion is seen. Intrahepatic biliary radicals are normal in course and calibre. Portal and hepatic veins are normal in course and calibre. Portal vein at porta measures 13mm in maximum diameter.

**Gall bladder:** is well distended with clear lumen and normal wall thickness. No calculus is seen. No pericholecystic fluid seen. CBD is normal in calibre and measures 2.2mm in maximum diameter.

**Pancreas:** is normal in size and echotexture. No focal lesion is seen. The pancreatic duct is not dilated.

**Spleen:** is normal in size (8.1cm) and echotexture. No focal lesion is seen.

**Both kidneys:** are normal in size, shape, position and echotexture. Corticomedullary differentiation is maintained bilaterally. No evidence of any calculus or hydronephrosis is noted on either side. Two well-defined exophytic cortical cysts are seen in the left kidney measuring approximately 27.6 x 19.4mm at interpolar cortex and 14.2 x 10.0mm at lower cortex.

Right kidney measures 11.6 x 5.0cm. Cortical thickness measures 1.6cm.

Left kidney measures 11.1 x 5.0cm. Cortical thickness measures 1.2cm.

**Urinary Bladder:** is normally distended. The bladder wall thickness is normal. No calculus is seen. Pre-void bladder volume measures 493cc. Post-void residual urine measures 51cc.

**Prostate:** is enlarged in size, and shows homogenous echopattern. It approximately measures 4.6 x 4.2 x 4.0cm (volume: 41.4cc).

No free fluid / significant lymphadenopathy is seen in abdomen or pelvis.

Note is made of a small anterior abdominal wall defect measuring approximately 2.6cm at umbilical level with herniation of omental fat suggestive of umbilical hernia.

Reported 20/8/2019 6:05:16PM  
Report Status: Interim

Test Name	Results	Units	Bio. Ref. Interval
<b>THYROID PROFILE, TOTAL, SERUM</b> (Chemiluminescent Immunoassay)			
T3, Total	1.15	ng/mL	0.60 - 1.81
T4, Total	10.40	ug/dL	5.01 - 12.45
TSH	9.87	uIU/mL	0.35 - 5.50

**Note**

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
2. Recommended test for T3 and T4 is unbound fraction or free levels as it is metabolically active.
3. Physiological rise in Total T3 / T4 levels is seen in pregnancy and in patients on steroid therapy.

**Clinical Use**

- Primary Hypothyroidism
- Hyperthyroidism
- Hypothalamic - Pituitary hypothyroidism
- Inappropriate TSH secretion
- Nonthyroidal illness
- Autoimmune thyroid disease
- Pregnancy associated thyroid disorders
- Thyroid dysfunction in infancy and early childhood

Borderline High	200-239	150-199	130-159	160 - 189
High	>=240	200-499	160-189	190 - 219
Very High	-	>=500	>=190	>=220

**Note**

- Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL & LDL Cholesterol.
- As per NLA-2014 guidelines, all adults above the age of 20 years should be screened for lipid status. Selective screening of children above the age of 2 years with a family history of premature cardiovascular disease or those with at least one parent with high total cholesterol is recommended. Low HDL levels are associated with increased risk for Atherosclerotic Cardiovascular disease (ASCVD) due to insufficient HDL being available to participate in reverse cholesterol transport, the process by which cholesterol is eliminated from peripheral tissues. NLA-2014 identifies Non HDL Cholesterol (an indicator of all atherogenic lipoproteins such as LDL, VLDL, IDL, and Chylomicron remnants) along with LDL-cholesterol as co-primary target for cholesterol management therapy. Note that major risk factors can modify treatment goals for LDL & Non HDL. Lipoprotein B is an optional, secondary lipid target for treatment once LDL & Non HDL goals have been achieved. Testing for Apolipoprotein B, hsCRP, Lp(a) & LP-PLA2 should be considered among patients

Collected : 23/8/2019 8:34:00AM  
Received : 23/8/2019 8:35:32AM  
Reported : 23/8/2019 5:10:34PM  
Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
ANTI THYROID PEROXIDASE ANTIBODY:(ANTI TPO), SERUM @ (CLIA)	54.00	U/mL	<60.00

**Note:** Thyroid Peroxidase antibodies may be detected in individuals without clinically significant thyroid disease. They do not define the patient's thyroid functional status. Anti TPO is technically superior and a more specific method for measuring thyroid antibodies. It is especially useful in patients presenting with subclinical hypothyroidism where TSH is elevated but free T4 levels are normal.

**Clinical Use**

- Confirm presence of Autoimmune thyroid disease

**Increased Levels**

- Hashimoto thyroiditis
- Graves disease
- Postpartum thyroiditis
- Primary hypothyroidism due to Hashimoto thyroiditis

T4, FREE; FT4, SERUM (Chemiluminescent Immunoassay)	1.17	ng/dL	0.89 - 1.76
--	------	-------	-------------

**Clinical Use**

- Initial test of thyroid function in patients with suspected thyroid dysfunction
- Assess thyroid status in patients with abnormal total T4 concentrations
- Distinguish Euthyroid hyperthyroxinemias from hypothyroidism

**Increased Levels:** Thyroid hormone resistance, Hyperthyroidism

**Decreased Levels:** Primary hypothyroidism, Secondary hypothyroidism

TSH, ULTRASENSITIVE, SERUM (Chemiluminescent Immunoassay)	7.517	uIU/mL	0.550 - 4.7
--	-------	--------	-------------

**Note**

1. TSH levels are subject to circadian variation, reaching peak levels between 2 - 4 a.m. and at a minimum between 6-10 pm. The variation is of the order of 50%, hence time of the day has influence on the measured serum TSH concentrations.
2. Values <0.03 uIU/mL need to be clinically correlated due to presence of a rare TSH variant in some

\*Test results released pertain to the specimen submitted.\*All test results are dependent on the quality of the sample received by the Laboratory.  
 \*Laboratory investigations are only a tool to facilitate in arriving at a diagnosis and should be clinically correlated by the Referring Physician.\*Sample repeats are accepted on request of Referring Physician within 7 days post reporting.\*Report delivery may be delayed due to unforeseen circumstances. Inconvenience is regretted.\*Certain tests may require further testing at additional cost for derivation of exact value. Kindly submit request within 72 hours post reporting.\*Test results may show interlaboratory variations.\*The Courts/Forum at Delhi shall have exclusive jurisdiction in all disputes/claims concerning the test(s) & or results of test(s).\*Test results are not valid for medico legal purposes.\*Contact customer care Tel No. +91-11-39885050 for all queries related to test results.

PSC GREATER NOIDA (OMEGA 1)  
 38, P2, SECTOR-OMEGA 1ST BUILDERS  
 AREA, GREATER NOIDA  
 NOIDA

Name : Mr. RAJVIR SHARMA	Collected : 19/10/2018 8:59:00AM
Lab No. : 143233421    Age: 65 Years    Gender: Male	Received : 19/10/2018 9:12:51AM
A/c Status : P    Ref By: AIIMS	Reported : 20/10/2018 10:43:38AM
	Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
60-69	85		
>=70	75		

**Note**

1. National Kidney Disease Education program recommends the use of MDRD equation to estimate or predict GFR in adults (>=20 years) with Chronic Kidney Disease (CKD)
2. MDRD equation is most accurate for GFR <=60 mL/min/1.73m<sup>2</sup>
3. Recalculation of estimated GFR is required for African American race

**Interpretation**

CKD STAGE	DESCRIPTION	GFR(mL/min/1.73m <sup>2</sup> )	ASSOCIATED FINDINGS
0	Normal kidney Function	>90	No Proteinuria
1	Kidney damage with normal or high GFR	>90	Presence of Protein, albumin, cells or casts seen in urine
2	Mild decrease in GFR	60 - 89	-
3	Moderate decrease in GFR	30 - 59	-
4	Severe decrease in GFR	15 - 29	-
5	Kidney Failure	<15	-

*Self A/c Status*  
*29-11-19*

**Comments**

Modification of diet in renal disease (MDRD) equation is most thoroughly validated and superior to all the other methods for estimation of GFR. It does not require weight as a variable and yields an estimated GFR normalized to 1.73m<sup>2</sup> body surface area. Using serum creatinine alone gives a poor inference of GFR because they are inversely related and effects of age, sex and race on creatinine production complicate interpretation. For African American races a modified formula is used for calculation of GFR.

 Reported: 20/8/2019 6:05:08PM  
 Report Status: Interim

Test Name	Results	Units	Bio. Ref. Interval
AST/ALT Ratio	0.90		<1.00
GGTP @ (JRC)	27	U/L	<55
Alkaline Phosphatase (ALP) @ (JRC-AMP)	104	U/L	30 - 120
Bilirubin Total (DPD)	1.26	mg/dL	0.20 - 1.10
Bilirubin Direct (DPD)	0.21	mg/dL	<0.20
Bilirubin Indirect (Calculated)	1.05	mg/dL	<1.10
Total Protein (Biot)	7.30	g/dL	6.40 - 8.10
Albumin (BCG)	4.01	g/dL	3.20 - 4.60
A : G Ratio (Calculated)	1.22		0.90 - 2.00

**Note**

1. In an asymptomatic patient, Non alcoholic fatty liver disease (NAFLD) is the most common cause of increased AST, ALT levels. NAFLD is considered as hepatic manifestation of metabolic syndrome.
2. In most type of liver disease, ALT activity is higher than that of AST; exception may be seen in Alcoholic Hepatitis, Hepatic Cirrhosis, and Liver neoplasia. In a patient with Chronic liver disease, AST/ALT ratio > 1 is highly suggestive of advanced liver fibrosis.
3. In known cases of Chronic Liver disease due to Viral Hepatitis B & C, Alcoholic liver disease or NAFLD, Enhanced liver fibrosis (ELF) test may be used to evaluate liver fibrosis.
4. In a patient with Chronic Liver disease, AFP and Des-gamma carboxyprothrombin (DCP)/PIVKA II can be used to assess risk for development of Hepatocellular Carcinoma.

Test Name	Results	Units	Bio. Ref. Interval
<b>LIPID PROFILE, BASIC, SERUM</b> (Spectrophotometry, Calculated)			
Cholesterol Total	195.00	mg/dL	<200.00
Triglycerides	179.00	mg/dL	<150.00
HDL Cholesterol	36.00	mg/dL	>40.00
LDL Cholesterol	123.20	mg/dL	<100.00
VLDL Cholesterol	35.80	mg/dL	<30.00
Non-HDL Cholesterol	159.00	mg/dL	<130.00

**Interpretation**

NATIONAL LIPID ASSOCIATION RECOMMENDATIONS (NLA-2014)	TOTAL CHOLESTEROL in mg/dL	TRIGLYCERIDE in mg/dL	LDL CHOLESTEROL in mg/dL	NON HDL CHOLESTEROL in mg/dL
Optimal	<200	<150	<100	<130
Above Optimal	-	-	100- 129	130 - 159
Borderline High	200-239	150-199	130-159	160 - 189
High	>=240	200-499	160-189	190 - 219
Very High	-	>=500	>=190	>=220

**Note**

- Measurements in the same patient can show physiological & analytical variations. Three serial samples 1 week apart are recommended for Total Cholesterol, Triglycerides, HDL & LDL Cholesterol.
- As per NLA-2014 guidelines, all adults above the age of 20 years should be screened for lipid status. Selective screening of children above the age of 2 years with a family history of premature cardiovascular disease or those with at least one parent with high total cholesterol is recommended.
- Low HDL levels are associated with increased risk for Atherosclerotic Cardiovascular disease (ASCVD) due to insufficient HDL being available to participate in reverse cholesterol transport, the process by which cholesterol is eliminated from peripheral tissues.
