TO THE HIGHER AUTHORITY RELATED TO JUDICIAL SERVICES

Dear,

Sir/ Madam,

I would like to inform you that Mrs. Mridula Pardey, aged 51 years, W/o Mr. Praveen Kumar Pandey, Addtional District Judge, Kanpur Dehat, R/o Jaudicial Officer Colony, Kanpur Dehat, their treatment is going on in Shri Gauri Multi Speciality Hospital here. she was diagnosed as L.S. spine injury, with traumatic collection / abscess in left gluteal region, LBP, PID, she was injured on 16/09/2018 due to RTA, after this, he got admitted in Fortis hospital Noida she received treatment from 17/9/2018 to 21/09/2018. After this she was treated in other institutes, after this, she has been continuously being treated in our institute since 14/05/20, under us (Dr. Sanjay Tripathi MBBS, MD Medicine, Fellowship Critical Care) Dr. Tushar MBBS MS Ortho orthopedic & Spine Surgeon, sir, I have to inform you that our hospital is equipped with all facilities and team of senior doctors. The doctors concerned with the treatment of their disease are available for treatment here, so there is no need to go for treatment to the other centre, and she will get complete treatment here, due to such a serious injury of Spine it can be dangerous to treavel for long distance. Kindly accept our request to extend the service and tenure of her husband to this station (Dist Court Kanpur Dehat) so that his wife's treatment can run smoothly here and she recovers soon.

Tushar

NAME: MRIDULA PANDEY Age/Sex: 40 Yrs/FEMALE MR No.: 1035
Ref. By.: DR.AVANISH RAI Date: 17-Apr.-2020

High resolution MRI was performed on a 1.5 Tesla MR Scanner, Siemens Magnetom
Essenza TIM+DOT (16 channels)

MRI – LUMBAR SPINE/ SCREENING PELVIS

A plain high resolution MRI of the lumbar spine was performed with whole spine screening study. A screening study through the pelvis and S.I. joints was also obtained.

Normal alignment and curvature is seen.

Disc desiccation with mild asymmetric posterior and left paracentral disc bulge is seen at L4-L5 level , indenting thecal sac with partial effacement of left lateral recess. No significant central canal or neural foraminal stenosis is seen. AP diameter of spinal canal is 13mm.

No significant disc herniation is seen at other levels.

The vertebrae show normal marrow signal with preserved height.

The spinal cord and conus are normal. The perivertebral soft tissues are normal. The sagittal bony canal dimensions are within normal limits.

The screening study through the rest of the spine reveals no significant abnormality.

The screening study through the pelvis and S.I. joints does not reveal any significant abnormality.

Remarks:

Disc desiccation with mild asymmetric posterior and left paracentral disc bulge at L4-L5 level , indenting thecal sac with partial effacement of left lateral recess.

The rest of the features are as described.
