

From,

Suraj Mishra,

Civil Judge (S.D.),

Lalitpur.

To,

The Registrar General,

Hon'ble High Court of judicature at

Allhahabad.

Through: **The District Judge,**

Lalitpur.

Subject:- **Application For consideration of selected options
for annual transfer.**

Respected Sir,

With due respect it is submitted that I have completed almost four and half year in D-istrict Lalitpur. I have been suffering from a serious slip disc problem in L4-L5 region for 8 months and doctor has advised me not to travel long distances by road and take proper precaution. My treatment is being done by Doctor K.D. Tripathi in District Prayagraj and after seeing my MRI report , he has said that if my problem increases further, the operation may have to be done. Therefore, I need a better treatment, so that my health does not cause any hindrance in the discharge of my office duties.

District Lucknow, Varanasi and Prayagraj have good medical facilities available for my treatment and also these cities are not far from my home district Mirzapur, therefore I will be able to discharge my official and social responsibilities properly by following my treatment & medical advice.

It is humbly submitted that under the present circumstances, it seems that effect of the covid-19 pandemic may continue for a very long time, for this reason it would be seriously detrimental to my health if I would have to travel repeatedly for better treatment.

Therefore, there is a humble request from Hon'ble High Court to consider my request generously and please transfer me to any of my given options.

With highest regards,

- Encl:** 1. MRI Report of applicant
2. Doctor's Prescription of applicant

Your's faithfully,

(Suraj Mishra),

Civil Judge (S.D.),
Lalitpur.

OFFICE OF THE DISTRICT JUDGE, LALITPUR

No. 1108 / P

Dated: 26-11-2020

Forwarded,

District Judge,

Lalitpur.

MRI OF LUMBO-SACRAL SPINE

REPORT:

High resolution MRI of lumbo-sacral spine was performed on a 3.0 Tesla MR Scanner, Siemens Magnetom Skyra. Following imaging sequences were obtained:

Axial: T2 and T1 w turbo-spin-echo (TSE)

Coronal: STIR

Sagittal: T2 TSE, T1 TSE

Vertebral bodies are normal in height and alignment with **partial straightening of lumbar lordosis**. Multilevel small marginal osteophytes are seen. Bone marrow signal intensity is normal. No pars interarticularis defect is seen.

Mild disc desiccation is seen at L4-5 level with mildly reduced disc height. Rest of the intervertebral discs show normal high signal intensity of nucleus pulposus on sagittal T2 weighted images with maintained disc heights.

Focal central and left paracentral disc protrusion is seen at L4-5 level causing narrowing of bilateral lateral recesses (left > right) with indentation on thecal sac, ventral cauda equina and traversing left L nerve root.

No abnormal pre or para vertebral soft tissue is seen.

Mild ligamentum flavum hypertrophy is seen at L4-5 level. Facet joints are seen normally.

Conus medullaris is normal in dimensions & signal intensity. Thecal sac and cauda equina nerve root show no abnormality.

Both sacro-iliac joints are normal.
