

LATEST 3T-3D WHOLE BODY MRI

BAREILLY MRI & C.T. SCAN CENTRE

Rampur Garden, Opp. - Prabha Cinema, Bareilly
PH. : 0581-2510123, 2511678, 8192010123

REPORT

NAME : MR. SRISHTI CHAURASIA 43 YRS/F
REF BY : SSVH

DATE : SEPTEMBER 15 , 2020

MRI LUMBO-SACRAL SPINE

Multiple sequences were acquired in multiple planes

- Mild straightening of lumbar lordosis with maintained vertebral alignment, suggestive of spasm.
- Lumbar spondylotic changes seen as marginal osteophytes.
- Disc desiccation with postero-lateral disc extrusion is seen at L4/L5 level abutting anterior thecal sac, encroachment of bilateral neural foramina, causing impingement of bilateral L4 exiting nerve roots.
- Disc desiccation with postero-lateral disc bulge is seen at L5/S1 level abutting anterior thecal sac.
- Rests of the intervertebral discs appear normal.
- Bony spinal canal is of normal dimensions.
- Lower dorsal cord and conus do not show any abnormality.
- The roots of cauda equina are normal.
- Normal appearances of rest of the thecal sac and exiting nerve roots.
- Bilateral S.I. joints appear normal.

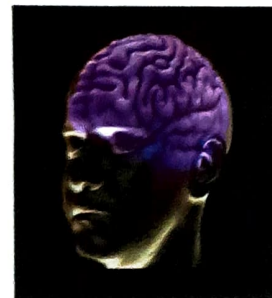

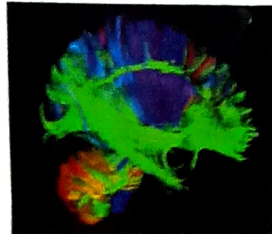

IMPRESSION:

- Disc desiccation with postero-lateral disc extrusion at L4/L5 level abutting anterior thecal sac, encroachment of bilateral neural foramina, causing impingement of bilateral L4 exiting nerve roots.
- Disc desiccation with postero-lateral disc bulge at L5/S1 level abutting anterior thecal sac.
